

**Practical Exercises for
Mobile Business I
WS 2014/2015**

**Work sheet 1
Technology Basics I**

Professur für M-Business
& Multilateral Security

Institut für Wirtschaftsinformatik

Prof. Dr. Kai Rannenberg

Dipl. Kfm. Lars Wolos
Email: Lars.Wolos@m-chair.de

18. November 2014

Exercise 1 (Cell-based communication, L02)

- a) What does cell-based communication mean and what are the implications (basic principle, physical form, dependencies)?
- b) Write down the advantages and drawbacks of cellular networks compared to alternative solutions.
- c) In this context, explain "Multiplexing" and why it is used in communication systems.
- d) Explain the term "digital dividend".

Exercise 2 (Data Transmission Paradigms for data transmission in communication networks, L02)

What are the characteristics (including advantages and disadvantages) of

- (i) packet-oriented and
- (ii) circuit-switched mobile data services?

Exercise 3 (Mobile Telecommunication Infrastructures, L02)

- a) Which are the three “security services” offered by GSM?
- b) Please outline and comment on the security model of the GSM infrastructure regarding subscriber authentication (challenge-response procedure for subscriber authentication).
- c) Name the weaknesses of the GSM security model and describe in particular the possible consequences resulting from these weaknesses.
- d) Which additional security features have been implemented in 3G (UMTS) networks, compared to those of GSM?

Exercise 4 (Classic Mobile Communication Services, L04)

- a) Which are the so-called Classic Mobile Communication Services introduced with 2G digital mobile networks?
- b) Please describe each one of these services.
- c) Mobile Data is one of the Classic Mobile Communication Services above. When looking at GSM networks, which are the relevant Mobile Data Services?

Exercise 5 (Wireless LAN Components and Infrastructures, L03)

- a) What are the components in a Wireless LAN?
- b) Name two types of Wireless LAN networks.
- c) In a wireless LAN environment, what is a so-called “Distribution system”? Also please explain Wireless LAN roaming within a distribution system.
- d) There are numerous methods for Wireless LAN encryption. Which one of these offers reasonably secure encryption, using a pre-shared key?

Processed Lectures:

- **Lecture 2:** Basic Communication Paradigms and Mobile Telecommunications Infrastructures
- **Lecture 3:** Wireless internet-oriented Infrastructures and Protocols
- **Lecture 4:** Mobile Communication Services
