

Lecture 9

Mobile Devices

Mobile Business I (WS 2015/16)

Prof. Dr. Kai Rannenberg

Deutsche Telekom Chair of Mobile Business & Multilateral Security Johann Wolfgang Goethe University Frankfurt a. M.

[Source: Nokia]

Introduction

- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O

Mobile Terminal vs. Mobile Device

 A Mobile Device is a small, handheld computing device.

 Mobile Terminal emphasises the fact that the mobile device represents the end of a communications link or the edge node of a communications network.

mobile no business

Device Manufacturers and Brands

(including some historic ones)

- Alcatel
- Apple
- Audiovox
- Benefon
- BenQ Mobile
- Blackberry
- Bosch
- Ericsson
- Google
- HTC
- Huawei
- LG Electronics
- Microsoft
- Motorola
- NEC
- Nokia
- Panasonic

- Philips
- Sagem
- Samsung
- Sendo
- Siemens
- Sony
- TCL Communication
- Telepong
- Telit
- Telme
- Toshiba
- Trium
- Windhorst
- Xelibri
- Yulong
- ZTE

Worldwide Mobile Phone Sales to End Users by Vendor Q1-2015 vs. Q1-2005

Company	1Q15 units	1Q15 Market Share (%)	1Q05 units	1Q05 Market
Samsung	97,986	21.3	24,479.8	13.5
Apple	60,177	13.1	-

Source: [Gartner2015a]

^{*}The results for Lenovo include sales of mobile phones by Lenovo and Motorola both in 2Q15 and 2Q14.

Worldwide Smartphone Sales in Q2-2013

"Smartphones accounted for 51.8 percent of mobile phone sales in the second quarter of 2013, resulting in smartphone sales surpassing feature phone sales for the first time."

[Gartner2013b]

Evolution of Mobile Devices

Development of device capabilities

- Multimedia applications (MP3, radio, video, TV, etc.)
- Possibility to execute 3rd party software
- Sensors (microphone, camera, GPS, ...)
- Data Services (Internet connectivity)
- Short Message Service (SMS)
- Interactive Voice Response (IVR)
- General telephony capabilities

Evolution of Mobile Devices Examples

⊘ Microoptic

2010

Google

Mobile Devices Size

- Everybody wants smaller devices.
- Everybody

Worldwide Device Shipments by Segment - 2014 View

Worldwide device shipments and projections by segment show a shift in consumer preferences:

In 1,000 Units

Device Type	2012	2013	2014	2015
PC (Desk-based and Notebook)	341,273	296,131	276,221	261,657
Ultramobile (Thin, light, slate or hybrid, e.g. Chromebooks)	9,787	21,517	32,251	55,032
Tablet	120,203	206,807	256,308	320,964
Mobile Phone	1,746,177	1,806,964	1,862,766	1,946,456
Other Ultramobiles (Hybrid and Clamshell)	-	2,981	5,381	7,645
TOTAL	2,217,440	2,334,400	2,432,927	2,591,753

The reason may be an increasing focus on energy efficiency and weight.

Worldwide Device Shipments by Segment - 2015 View

Worldwide device shipments and projections by segment show a shift in consumer preferences:

Device Type	2014	2015	2016	2017
Traditional PCs (Desk-Based and Notebook)	277	251	243	233
Ultramobiles (Premium)	37	49	68	89
PC Market	314	300	311	322
Ultramobiles (Tablets and Clamshells)	226	214	228	244
Computing Devices Market	540	514	539	566
Mobile Phones	1,879	1,94	2,007	2,062
Total Devices Market	2,419	2,454	2,546	2,628

Note: The *Ultramobile (Premium)* category includes devices such as Microsoft's Windows 8 Intel x86 products and Apple's MacBook Air.

The *Ultramobile (Tablets and Clamshells)* category includes devices such as, iPad, iPad mini, Samsung Galaxy Tab S 10.5, Nexus 7 and Acer Iconia Tab 8.

 The reason may be an increasing focus on energy efficiency and weight.

"Fair" and ecologically friendly **Mobile Devices**

- Grounded in the idea to develop and market smartphone hardware and software designed and produced with minimal harm to people and planet.
- Strict observation of:
 - Type of raw materials (ecological aspects)
 - Origin of raw materials (political aspects)
 - Lifespan of components and easy repair (durability aspects)
- **Fairphone 1** out of stock
 - **25,000** from the first batch of Fairphones sold in 2013.
 - **35,000** from the second batch of Fairphones on sale in 2014.
- Fairphone 2

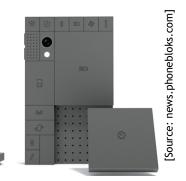

[www.fairphone.com/about/]

- Over 15,000 phones ordered
- Delivery to start in December 2015, new orders ship in January 2016

It is "not possible to produce a 100% fair phone yet, but by aiming toward this end seeks to raise awareness among consumers and in the mobile industry." [Wiki2013]

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O

- Categorisation is possible by:
 - Technical characteristics
 - Application aspects
 - Functional completeness (Is the functionality comparable to a desktop PC/Laptop?)
 - Size of the device
 - Security features

Categorisation of Mobile Devices

Technical Characteristics

- Hardware independence
 - Independent devices
 - Devices with external communication
 - Devices with external security modules
 - Devices with external memory
- Operating system Characteristics
 - Memory security, file security, access control
 - Security module support, secure I/O, program and system integrity

Categorisation of Mobile Devices Application Aspects 1

- Lifespan of an application
 - Battery consumption, amount of data, and size of memory
 - Data integrity, amount of communication, and costs
- Completeness of the functionality for the enduser
 - Information / Reaction
 - Limitations due to device size
 - Feature Sets

Categorisation of Mobile Devices

Application Aspects 2

- Device size
 - Small / integrated devices
 - "Pocket-sized"
 - "Tablet-sized"
 - "Laptop-sized"
- Access to the security module
 - Data integrity, encryption
 - Digital signatures
 - Access control, authentication

Different requirements for different kinds of devices:

	Mobile Phone	Tablet	Laptop
Number of "Switch-ons" per day	low	low	variable
Frequency of use cases	very high	rather low	low
Duration of usage per task	?	short/ medium	high

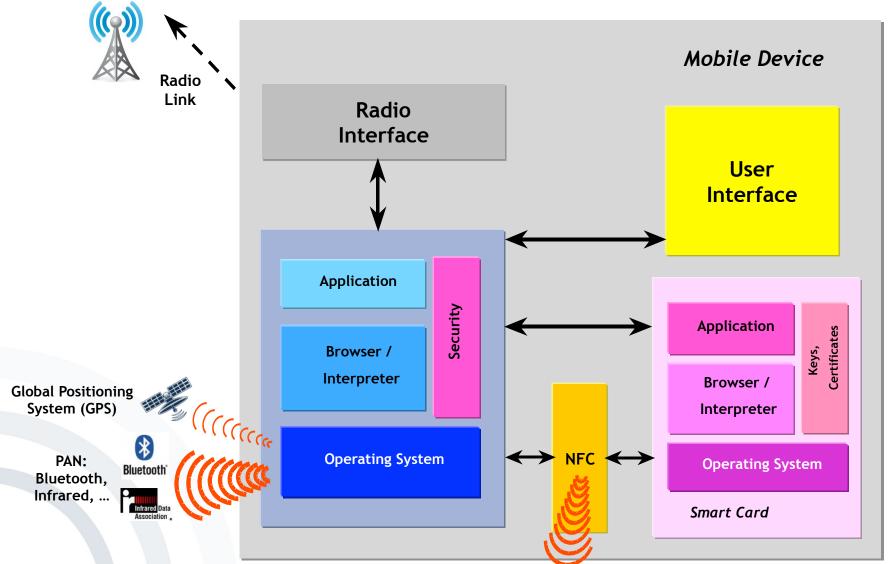

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O

OS - Functional Architecture

Size of a mobile Device

- The size of a mobile device is considerably determined by its:
 - Input Facilities (e.g. keyboard)
 - Output Facilities (e.g. display)
 - Separation of components (e.g. display in the watch, head-mounted-displays)

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O

Accumulators

Apple iPhone 6S (2015)	Talk time: Up to Internet use: Up to 10 10 hours on LTE, up t	O hours on 3G, up to	Li-Polymer; 1,715 mAh	LED-backlit LCD, capacitive touchscreen, 16m colours

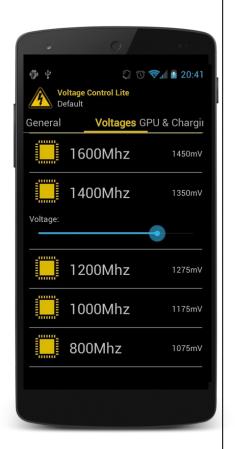

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O

Processors

- Performance increase
 - Higher clock frequency (but frequency scaling typically comes at the price of higher voltage!)
 - Larger on-die-caches (cache memory) built into the CPU ("on die") to reduce memory access time
- Power consumption decrease
 - Processor's core voltage (1995: 3.5 V; 2000: 1.35 V; 2013: 1.0 V)
 - Lower bound is the voltage needed to switch a transistor
 - Quadratic relationship between voltage and power consumption
- Less heat loss
- Power Management
 - triggered by changes of the energy supply

Picture source: "Voltage Control" Application (Google Play Store) by darek.xan

Processors

Overview of Mobile Devices

Logo	Device	Processor	Mhz	MIPS
	Nokia N-Gage (2004)	ARM7	104	??
	HTC/T-Mobile MDA (2002)	Intel StrongARM	206	274
	Apple iPhone 4, iPad (2010)	Apple A4	800 (iPad: 1000)	2.000
	Notebook (2006)	Intel CoreDuo Processor	2.000	< 14.000
	Notebook (2010)	Intel Core i7 Quad-Core	3.600	> 20.000
	Apple iPad Air 2 (2014)	Apple A8X	1.500 (Triple-core)	??
	Apple iPhone 6S (2015)	Apple A9	1,800 (Dual Core)	??

- General trade-off between storage on the server vs. storage on the client
- Storage on the client
 - Subscriber Identity Module (SIM)
 - Random Access Memory (RAM)
 - Memory cards
 - Microdrives

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Liquid-Crystal-Displays (LCD)
 - Organic Light Emitting Diodes (OLED)
 - Means for I/O

DisplayLiquid-Crystal-Displays (LCD)

- The LCD technology is widespread in the market.
- "Consists of an array of tiny segments (called pixels) that can be manipulated to present information"
- Examples:
 - Dual Scan Twisted Nematic (DSTN)
 - Thin-film Transistor (TFT)

Example: Dynasheet (Toshiba) 1cm, 200g, 2005

- DSTN-Display (Dual Scan Twisted Nematic)
 - Passive matrix
 - LCD displays with passive control have a relatively high latency (generally more than 100 ms). This implies a blurred image with frequently changing picture elements.
- TFT-Displays (Thin Film Transistor)
 - Active (transistor for each pixel)

DisplayResolution

Logo	Mobile phone	Display	Resolution	Colors
	Nokia 6310 (2001)	Graphic	96 x 65	none
	Siemens S55 (2002)	Color	101 x 80	256
	Nokia N-Gage (2004)	Color	176 x 208	4.096
	Samsung E700 (2003)	TFT-Color	160 x 128	65.536
T TO	MDA III (2004)	Touch TFT	320 x 240	65.536
To Mobile . D	MDA pro (2005)	Touch TFT	640 x 480	65.536
	T-Mobile Ameo (2007)	Touch TFT	640 x 480	65.536
	Apple iPhone 4 (2010)	Touch TFT	960 x 640	16.7m
	Apple iPad 2 (2010)	Touch TFT	1024 x 768	16.7m
	Apple iPad 3 (2012)	Touch TFT	2048 x 1536	16.7m
	Apple iPad Pro (2015)	Touch TFT	2732 x 2048	16.7m

Organic Light Emitting Diodes (OLED)

- Polymers can convert electric energy to light.
- Complete layer is thinner than 500 nm (0.5 thousandth part of one mm), luminosity approx. 100W electric bulb.
- 180° viewing angle

OLED consist of self lighting polymer molecules:

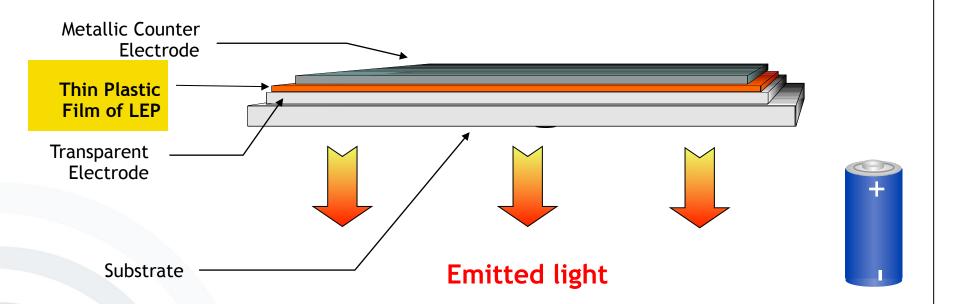

- No background lighting is necessary
- Electric power consumption decreases and longer usage times become possible.
- Space for extra components
- Devices can be thinner and lighter.

Display

Organic Light Emitting Diodes (OLED)

Light Emitting Polymer Device

- Polymers are large molecules widely known as plastics.
- Light Emitting Polymers (LEPs) are special plastic materials that convert electrical power into visible light.
- A thin film of Light Emitting Polymer put between two electrodes will glow ...

Organic Light Emitting Diodes (OLED)

Light Emitting Polymers convert electrical power into visible light:

electrical power Light Emitting Polymer

visible light

This is related to the fluorescence of polymers where UV-radiation is converted into visible light:

UV-radiation

Fluorescent Polymer

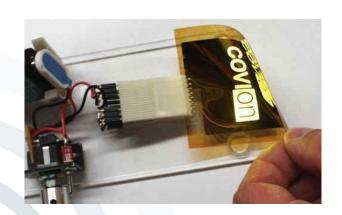

visible light

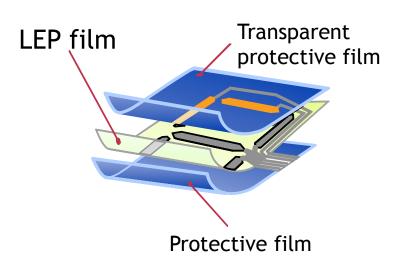

Display

Organic Light Emitting Diodes (OLED)

 Because plastic materials are flexible and robust even non-planar displays can be manufactured ...

Types of OLED

- Two main types (based on the driving electronics)
 - PMOLED (Passive-Matrix OLED)
 - Simpler electronics, no storage capacitor
 - Lower cost
 - Lower lifetime (due to the higher voltage needed)
 - Limited size and resolution
 - Mostly used for simpler displays, e.g. mp3 players, mobile phone sub-displays, etc.
 - AMOLED (Active-Matrix OLED)
 - Contains storage capacitor to maintain the pixel line state
 - No restrictions on size and resolution
 - More costly
 - Used for higher quality screens, such as mobile phones (Blackberry Priv, HTC One A9, Samsung Z3, Microsoft Lumia 950 XL, etc.)

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O
 - Device Input
 - Personal Area Networks (PAN)

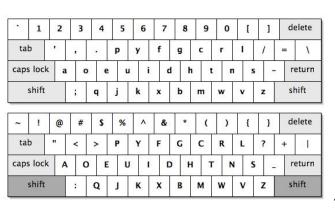

- Excursion "standardization battles": QWERTY vs. Dvorak's DSK
- 1868 Christopher Latham Sholes Copyright (goal: minimum key conflicts)
- 1873 sale of QWERTY to E. Remington & Sons
- "Jamming" was a problem until 1979. As a consequence, the ball-shaped head technique was invented.

- De-facto standard, high competition
- 1936 Dvorak's Simplified Keyboard (DSK)
- Goals:
 - Keys which are used most frequently are close to each other
 - Change of hands well balanced
 - Frequent keys preferably with strong fingers
- Fact = We all use QWERTY.
- What did go wrong?

- QWERTY is an example for market failure in the presence of network effects.
- "Worse standard dominates a better standard".
 - **⇒** What is the better standard?
- Further problems: Lock-in, switching costs
- Unfortunately, the case is not as easy!

- Often cited US Navy Research Report of 1944 DSK is more efficient than QWERTY.
 - No official report but a falsely cited internal paper from an officer = Lieutenant Commander August Dvorak!
 - Critics: Methodological biases: Two test persons of different age and abilities
 - Chaos between 108 and 180 hits per minute Many contrasting findings
 - ... the QWERTY keyboard appears to be fast enough for almost all users. If you are just driving about in town you do not need a 500 horse-power V8." (Poole 1997)
- Things are not as easy as they seem to be!
- For more details see: [LiebowMargol1996].

Currently, the following input solutions for mobile devices exist:

- QWERTY-Keyboard
- Palm-Graffiti
- Tegic T9
- Octave
- SWYPE
- Recognition of handwriting
- Speech recognition

© Palm © Microsoft © Walk PC

mobile susiness

Input QWERTY-Keyboards

- Handwriting recognition software
- Artificial script, based on upper-case characters
- Can be drawn blindly with a stylus on a touch-sensitive panel

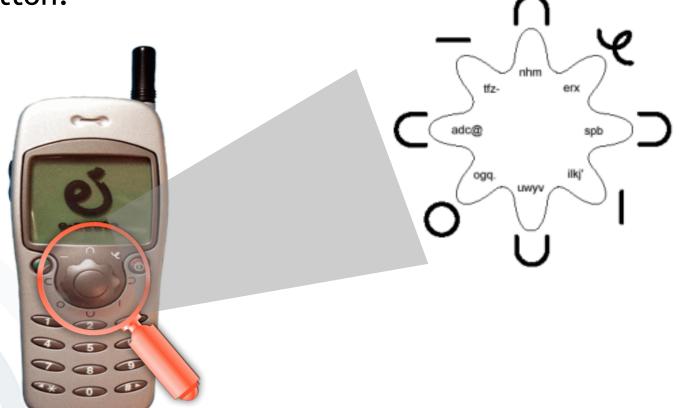

Input Tegic Communications T9

- T9 (*Text on 9 keys*) is a predictive text technology developed by Tegic Communications.
- Widely used by: LG, Samsung, Nokia, Siemens, Sony Ericsson, Sanyo
- Uses a dictionary of words, which is used to look up all the possible words, corresponding to the sequence of keypresses.
- Available in 27 languages

 Characters can be input by either pen or button.

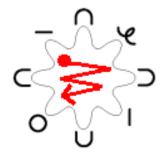

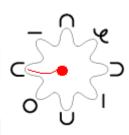

Input Octave

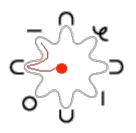

"capital letters"

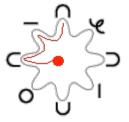

"reset"

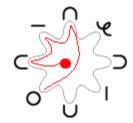

a·

at·

ath·ens

atmo·sphere

Fiatly

[http://swypeinc.com/product.html]

- Input by sliding a finger or stylus from letter to letter, lifting only between words
- Word is guessed using error-correcting algorithms and language model
- Developed by Swype Inc.
- First commercially available on Samsung Omnia
 II (on Windows Mobile 6.5), also available for Android

Input Speech Recognition

- Translation of spoken words into text
- Supports various applications, e.g. for
 - initiation of phone calls
 - message composition
 - **...**
- Originally performed directly on PDAs/smartphones
- Nowadays usually provided as a cloud service
 - Voice is recorded and compressed
 - Sound file is sent to a server where the actual recognition process is performed
 - Text is sent back to smartphone
- Examples
 - Apple Siri
 - Google Now
 - Samsung S-Voice
 - Windows Phone Voice Control
 - Blackberry 10 Voice control
 - •
- May become important feature for smart watches
- In contrast, term *voice recognition* refers to *identity* of the speaker, not *what* is said.

- Introduction
- Categorisation of Mobile Devices
- Components of Mobile Devices
 - Accumulators
 - Processors, Memory, and Storage
 - Display
 - Means for I/O
 - Device Input
 - Personal Area Networks (PAN)

- Personal environment, short range
- Purpose: Connection of devices in short range, for example mobile device and printer.
- Replaces cable-connections:
 - Infrared Data Association (IrDA)
 - Bluetooth
 - Near Field Communication (NFC)

- IrDA: Infrared Data Association (1993):
- Standardized infrared-protocols
- Asynchronous, serial connections up to 115 kbit/s (Serial Infrared) or 4 Mbit/s (Fast Infrared)
- Point-to-Point
- Protocol-family for various purposes

- Exemplary applications:
 - Transmission of mobile business cards
 - Sales data extraction from cigarette vending machines
 - Connection between mobile and laptop
 - Wireless printing
 - Remote control for consumer electronics, e.g. TVs

Personal Area Network (PAN) Infrared

- Attributes:
 - Wireless
 - Range of up to 10 meters
 - Illumination-angle 15° 30°
- Disadvantages:
 - Sounding: If the infrared-ray misses the target
 - Optical connection required
 - Short interruptions of the optical connection,
 e.g. between laptop and mobile phone in trains,
 lead to complete network-interruption.

Bluetooth

- Frequency range of 2.4 GHz
- Simple and cheap possibility to set up ad-hoc networks of limited range (up to 10 meters)
- No official standard, but de-facto-standard
- Consortium: Ericsson, Intel, IBM, Nokia, Toshiba, etc.
- v4.2 (2014) improved speed, privacy, and connectivity (support for the Internet of Things)
- Broadly supported by related industries:
 - Computer hardware
 - Software
 - Consumer electronics

Popular Bluetooth Applications

Sound transmission (to earphones, headphones or Hi-Fi equipment)

Bluetooth Applications

- Connection of periphery-devices (headsets, keyboards, mice, etc.)
- Setting up of ad-hoc networks for spontaneous data exchange
- Ad-hoc connection of different networks (e.g. laptop ⇔ mobile or phone ⇔ GSM ⇔ net)
- Applications similar to applications based on infrared technology
- Weaknesses of infrared technology were overcome
 - Increased bandwidth (up to 865.2KBit/s)
 - No optical connection between devices necessary
 - Expanded range (up to 10m)
 - Allows setting up of ad-hoc networks instead of point-topoint connections

Near Field Communication (NFC)

- Enables radio communication between
 - two NFC devices,
 - an NFC device and an (unpowered) tag.
- NFC based on existing radio-frequency identification (RFID) standards
- Range: 10 cm or less
- Transfer rates between 106 kbit/s and 424 kbit/s
- Three major modes of NFC
 - Reader/Writer Mode
 - Card Emulation Mode (referred to as "Digital Wallet")
 - Peer-to-Peer Mode
